The present application concerns a method of purifying by distillation the methanol used in propylene oxide synthesis, which is contaminated, for example, by methoxypropanols. The characteristic feature of the method applied is the use of a partition column.

The prior art citations concern methods of producing propene oxide. However, none of the documents contains anything to suggest, or a methodology for, purifying the solvent used therein by distillation. The method according to the description shows that methanol which is sufficiently pure to be re-used in propylene oxide
